Target: R&D / Technical **Preferred city: Shenyang** **Expected salary: CNY 9-15k**

EDUCATION

Northeastern University (Project 985)
Sep 2018 - Jun 2022

Mechanical Engineering / Materials Science and Engineering | Sino-French Dual Bachelor's Degrees

Campus: Deputy Head, Student Union Arts Dept.; organized campus arts festivals and coordinated departments.
Coursework: Engineering Graphics, Mechanical Design, Fluid Mechanics, Continuum Mechanics, Chemistry, Mechanics of Materials, Physical Chemistry, Physical Properties of Materials.

WORK EXPERIENCE

RLE INTERNATIONAL China — BMW Product Engineer — 2026 - Present

Project Experience: Responsible for BMW 5 Series and X5 interior parts (instrument panels, center consoles, doors and components with special surface treatments). Lead R&D teams and suppliers in resolving production, aftersales, cost-reduction and change issues through to closure.

Schaeffler Holding (China) Co., Ltd. — R&D Mechanical Engineer — 2022 - 2026

Patents: Multifunctional Support Structure for a BMS Housing; Utility Model Patent - Insulation Structure Design.

Stamped Parts PDCU Reuse	Handled production programs for Huawei, Geely, Changan and Mercedes-Benz, resolving air leaks and dimensional deviations. Reused the PDCU platform, analyzed customer standards and requirements, advised on technical issues and mounting locations, and delivered customer drawings, IMDS reports and other core documents.
Die-cast Parts	ECU: Selected high-voltage connectors for current requirements and performed InsuCo analysis during quotation. Defined housing materials and joining methods for thermal and protection requirements. Designed die-cast upper/lower housings, coordinated electromechanical interfaces with PCB engineers, produced 3D models and 2D engineering drawings, and finalized designs with suppliers. Used thermal simulation to reduce thermal interface material usage and cost; developed custom designs from scratch.
Plastic Parts	BMS platform development: Designed CSC upper/lower plastic housings and panel-layout drawings; calculated dimensional chains and used supplier mold-flow analysis to optimize reinforcing ribs and resolve housing warpage. Developed BMS housing double snap-fit and insulation designs for two related patents; the platform concept was applied to multiple quotation projects.
Weichai BMS OEM Support	Advised on coating areas and the selection of sealing and fixing adhesives, insulation and housing materials; resolved connector detachment in customer DV tests. Provided technical project support, built BMU, CSC, 4G and HVM samples, and maintained effective communication across departments.

SKILLS

Mechanical Design: Proficient in **CATIA, Creo and AutoCAD**; sheet-metal and injection-molded part design, and dimensional-chain analysis.
Languages: English working proficiency for overseas projects; **French B2** (French-major Level 4 equivalent).

PROFILE

Mechanical engineer with approximately four years in structural design and product development for automotive electronic housings, mounting structures and platforms. Experienced in injection-molded, die-cast and stamped part design, structural analysis, 2D/3D drawings, dimensional-chain analysis, thermal simulation and mold-flow optimization. Collaborate with customers, suppliers and internal teams on technical reviews, design optimization, onsite builds, production issue closure, and development and production launch of multiple projects. Strong sense of responsibility and ability to work under pressure.
